

M3 live pilot: Provider outcomes by group

36 constructed cells | 29 Provider requests | 512-token cap | 0 retries

A request ending with finish_reason=length is counted as truncated, even when the app terminal state was OK.

There were 26 length endings, 3 stop endings and 7 cells with no generation request.

Sixteen B/C cells ended at length while the app reported a completed turn; this is not generation success.

One usage report showed 513 completion tokens against the configured 512-token limit. Constructed cases only; not teacher-rated and not evidence of student learning.
